IN THE SPECIFICATION:

Please replace the Abstract with the following re-written Abstract:

A directly imageable planographic printing plates plate that is high in image productivity and easy to check is produced by using a directly imageable planographic printing plate that comprises at least a substrate, a thermo-sensitive layer and a ink-repelling layer in this order, wherein the thermo-sensitive layer in the printing area contains a dye that has an absorption maximum in the range of 400 nm to 700 nm, and the difference between the reflected absorption of the non-printing area and the reflected absorption of the printing area, observed at the absorption maximum wavelength of the dye, is not less than 0.3 and not more than 2.0.

Please replace the line at page 49, line 21, with the following re-written line:

-- Solvent: toluen toluene --

2
